

Application for Financial Aid (rev. 2008)

COUNTRY: **ALGERIA**

I. DATA TABLE

Population	31 million
Area	2,382 thousand square kilometres
Water Available	12 billion cubic metres

II. RATIONALE FOR APPLICATION

When you divide our total water available by our total area, we have the LEAST water per land area.

Algeria is dry. We have so much more land than other countries so we need more water. This chart illustrates that Algeria clearly has less water per square kilometer of land area. The Algerian people clearly deserve land that is as lush as our good friends in Jordan and Turkey.
